

# ENT Specialist Medical Report

|                      |                           |
|----------------------|---------------------------|
| Patient Name         | Mr. Ahmed Khan            |
| Age / Gender         | 34 Years / Male           |
| Patient ID           | ENT-2026-1045             |
| Date of Consultation | 20 May 2026               |
| Consulting Doctor    | Dr. Priya Menon, MS (ENT) |

## Chief Complaints

- Persistent sore throat for 7 days
- Mild difficulty swallowing
- Nasal congestion and post-nasal drip
- Occasional ear discomfort on the left side

## Medical History

Patient reports a history of seasonal allergic rhinitis. No previous history of ear surgery or chronic sinusitis. No known drug allergies.

## Clinical Examination Findings

| Examination Area | Findings                                        |
|------------------|-------------------------------------------------|
| Throat           | Mild erythema of posterior pharyngeal wall      |
| Nasal Cavity     | Moderate mucosal congestion observed            |
| Ears             | Left ear shows mild Eustachian tube dysfunction |
| Lymph Nodes      | No significant cervical lymphadenopathy         |
| Temperature      | 99.1°F                                          |

## Provisional Diagnosis

Acute Pharyngitis with Allergic Rhinitis and Mild Eustachian Tube Dysfunction.

## Prescription & Recommendations

| Medication        | Dosage                  | Duration |
|-------------------|-------------------------|----------|
| Amoxicillin 500mg | Twice daily after meals | 5 Days   |
| Cetirizine 10mg   | Once daily at night     | 7 Days   |
| Steam Inhalation  | 2–3 times daily         | 5 Days   |
| Salt Water Gargle | Three times daily       | 5 Days   |

## Follow-Up Advice

Patient is advised to follow up after 7 days or earlier if symptoms worsen. Maintain adequate hydration and avoid cold beverages.
